NOVEL CORONA VIRUS (COVID-19) RT PCR REPORT

Investigation	Result	Unit	Bio. Ref. Range
Specimen	NPOP Swab		
SARS - CoV2 (COVID-19)	NEGATIVE		

Test Principle : Real Time PCR QIAGEN ROTOR Gene Q

Result Interpretation:

Negative Results indicate : SARS-CoV-2 is not detected in the given sample.
Positive Results indicate : SARS-CoV-2 is detected in the given sample.
Inconclusive Results indicate : Inconclusive . This could be due to low viral load in a sample. A repeat sample is recommended in such cases.

Remarks :

The Test is approved by ICMR, India (Registration No: MAGLIFSCPLNMH)
The PCR run is validated by RnaseP, Positive and Negative controls.
Negative result do not exclude COVID - 19 & should not be used as the sole basis for treatment or other patient management decisions.
Optimum specimen type and timings of peak viral levels during infections caused by SARS-Cov-2 have not been determined.
Collection of multiple specimen (Types & time points)from the same patient may be necessary to detect the virus.
A negative result in a single upper respiratory tract sample does not rule out SARS-CoV-2 infection. Hence in such cases a repeat sample should be sent.
Lower respiratory tract samples like sputum, BAL, ET aspirate are appropriate samples especially in severe and progressive lung disease.
